

# The Diver Solution™ Version 6.2: Ease of Dashboard Development

# 6.2

Version 6.2 includes a variety of enhancements to The Diver Solution’s enterprise web portal interface, DivePort, which streamlines the dashboard development process for administrators. No programming or scripting languages are required to develop professional and sophisticated looking dashboards, scorecards and information views for your user community. This significantly reduces total cost of ownership of your BI implementation by empowering more users with BI capabilities.

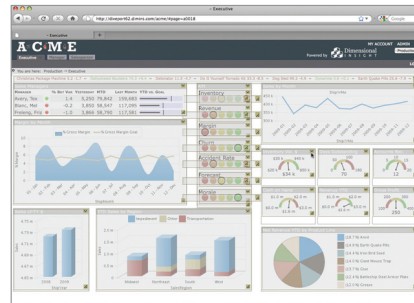

Experience the benefits:

- Quickly build robust dashboards
- Accelerate delivery of critical information
- Fewer resources required
- Less technical expertise needed

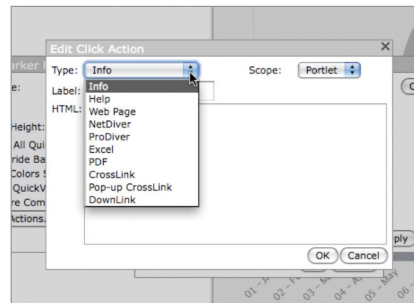

**FLEXIBLE PAGE LAYOUT & ADMINISTRATION** New administrative features now provide dashboard designers and administrators with complete flexibility over page layout, design and placement of charts, tables, and graphical indicators used to create dynamic information views for organizational users.

**CUSTOMIZING THE ONE-CLICK COMMAND CENTER** Designers can customize the downlink menu for each dashboard in order to display the most relevant end user options, such as invoking Diver’s advanced analytical clients, exporting to one of several supported file formats such as Adobe PDF or Microsoft Excel, or drilling down further into the current data entity.

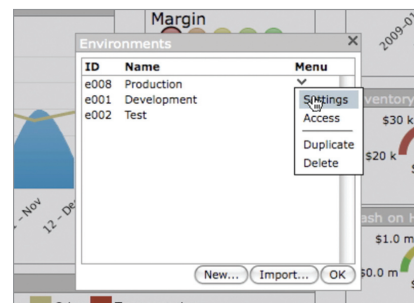

**REDESIGNED DIALOGUES & MULTIPLE ENVIRONMENTS** Version 6.2 incorporates redesigned dialogues to ease set-up and maintenance for deployments that involve multiple, customized dashboards for different users. The use of ‘environments’ allows administrators to maintain a single DivePort instance that houses production and test areas to speed the design and deployment process.

PAGE ITEMS ARE HOUSED IN THEIR OWN CONTAINER AND CAN BE MOVED DIRECTLY WITHIN EACH PAGE VIEW USING ‘DRAG-N-DROP’ FUNCTIONALITY.

ADMINISTRATORS CAN CUSTOMIZE USER PATHS TO ADDITIONAL DETAIL DATA BY CONFIGURING DI’S ONE-CLICK COMMAND CENTER FROM DIRECTLY WITHIN THE PORTAL INTERFACE — NO SCRIPTING NEEDED.

‘ENVIRONMENTS’ ARE EASILY ACCESSIBLE AND CAN BE DUPLICATED AND IMPORTED TO ALLOW FOR THE CREATION OF PRODUCTION AND TEST AREAS THAT CAN SPEED THE DESIGN AND DEPLOYMENT PROCESS.
