

## Gaining Insight Into Critical Care Patients With Analytics

While analytics can be used to improve all kinds of hospital operations, the intensive care unit comes with its own set of challenging factors. The acuity of the patients, the types of resources needed, and the amount of staffing are all complexities unique to the ICU. In order to improve care, reduce costs, and increase efficiency in the ICU, hospitals need to be able to break down the information that is specific to that department.

### Dimensional Insight's ICU Advisor:

- Compiles information from a wide variety of sources and organizes it to highlight ICU-specific challenges and opportunities alike.
- Comes with a set of pre-defined measures created specifically for the ICU—and designed to work with the hospital KPIs available in Dimensional Insight's Hospital Operations application.
- Provides customizable dashboards to display key metrics including daily arrival volumes, origination of arrivals, returns, and charges.
- Allows for the customized visualization of up-to-the-minute data.

ICU Advisor is an important part of an enterprise-wide view of improvement initiatives to ensure optimal overall results. It integrates data from the intensive care unit with information from Dimensional Insight's extensive family of healthcare applications.
