

Production 7.1:

Managing the Flow of Data

Objectives

In this class, you will learn how to use Workbench and DI Production to schedule and monitor routine updates to the data.

Prerequisites

- *ProDiver: Introduction to Advanced Data Analytics*, or equivalent experience, is required for this class.
- *Workbench Overview: An Integrated Development Environment*, or equivalent experience, is required for this class.

Intended Audience

This class is intended for developers and users that perform any part of the ETL process or create data structures for others.

Delivery

This class is interactive, runs for a total of two hours, and is delivered online by a training consultant.

Students have access to DI software using a training virtual machine.

Curriculum

Workflow and Scheduling

- What is Production?
- Using the Task Flow Panel
- Process Nodes
- Control Nodes
- Creating a Production Script

Working with Parameters

Parameters in Production

Parameter Process Node

Parameters in Visual Integrator

Creating Parameters in Visual Integrator

Inserting Visual Integrator Parameters

Using Parameters in a Loop Node

Running Production Scripts
